

Step 4: Data and evaluation templates - Outcome measures

Outcome measures	Rationale for measure (add local context)	Baseline (what activity was like before intervention)	What does improvement / success look like?	Data Sources
Number of non-conveyances to an acute hospital by the rapid response car				
When conveyance occurs time spent in emergency department				
Number of patients discharged directly from the emergency department following a conveyance (zero day discharge)				
Length of stay (days) of those admitted by the frailty team on arrival				
Excess bed day reduction within acute setting*				

*Agree with stakeholders how this metric is to be reported and realised across the system
