Exhibitor information

CATCH is a digital service for parents and carers through pregnancy to age 5. It delivers personalised information about your child’s health and development, helping you feel confident with self-care and easing parental anxiety.

CATCH helps to avoid the feeling of information overload that parents often face with their children’s health. With so many resources available, it can be difficult to know who to trust. CATCH provides NHS-approved guidance customised for where you live and is validated by local health professionals, so you won’t need to look elsewhere.

The Care and Health Information Exchange (CHIE) is a secure system which shares health and social care information between GP surgeries, hospitals, community and mental health, social services and others. CHIE helps professionals across Hampshire, the Isle of Wight and surrounding areas provide safer and faster treatment for patients. Information shared with CHIE also helps to improve treatment for future patients. We do this by assisting in legitimate research programmes and in helping the NHS and social care systems understand what new services might be needed to help care for the citizens of HIOW.

At Glooko our vision is to create the most meaningful technology for all people affected by diabetes. diasend® is our universal diabetes management solution; the system’s broad compatibility gives users increased accessibility to glucose readings, insulin doses and CGM data. This allows the user to become more involved in diabetes management and enables data-driven decision making. diasend® is easily customised, giving the individual patient and HCP only the data, they are looking for. Our customisation ultimately allows for a more effective conversation between the patient and the HCP.

The Dorset Care Record is a county-wide partnership of health and social care organisations including GPs. It is a safe way to keep all of your electronic health and social care information in one place. This makes it easier and quicker for staff, such as GPs, nurses and social workers to provide everyone with the right care.

FourteenFish is an exciting and dynamic software company that provides a range of innovative solutions to support the continuing professional development of medical professionals. Our appraisal toolkit uses the latest technology to provide a stress-free, user-friendly experience, and is widely used across the UK in both Primary and Secondary care environments.

Healthy.io is the category creator for smartphone urinalysis, offering the only CE marked and FDA cleared home urine test equivalent to lab-based devices. Its pioneering technology is shifting clinical grade urinalysis from the lab to the home. With 42 million annual urine tests undertaken in the NHS, Healthy.io’s first product line digitises urinalysis, a key diagnostic test used across clinical pathways such as diabetes, hypertension, CKD, antenatal care and UTIs. Fully integrated into clinical systems, our innovation empowers patients to self-test with no quality-compromise and securely share results with a clinician from any location using a test kit and app.

HORIBA Medical is a renowned specialist in the design and manufacture of automated in vitro diagnostic systems for haematology for over 30 years, biochemistry for over 15 years and has recently introduced a coagulation range. From compact near-patient testing solutions to high throughput laboratory systems, HORIBA Medical has successfully developed an array of analysers and data management solutions to meet all needs, enabling analysis anywhere it is required.
Lantum is a total workforce platform transforming how healthcare organisations and professionals connect. We are on a mission to save the NHS £1bn in staffing costs by 2030.

Our next generation software helps staffing managers to better manage their rotas, fill shift gaps and drastically reduces reliance and money spent on temporary staffing agencies and we are transforming the lives of healthcare professionals with our digital compliance passport, automated invoicing and next day payment service, Rocketpay.

We currently work with over 40 hubs, 56 federations, 1 integrated care system and 3 trusts as a tech and innovation partner.

Lifelight is a game changing technology that allows any smartphone or tablet device to measure blood pressure, pulse, breathing rate and oxygen saturation simply by a patient looking into the device’s built-in camera for 40 seconds. Completely contactless, with no additional hardware needed. Primary care applications include:

- Rapid, easy triage in urgent care at a check in kiosk for streaming
- Taking patient’s BP contactlessly in the GP wait area or during consultation
- Faster clinics where BP needs to be taken for all patients
- Care home staff can take vital signs using Lifelight before calling out-of-hours, saving unnecessary call outs.

Mind over Matter aim to progress low-cost, portable and non-invasive neuroimaging technologies from the lab to routine clinical use for point-of-care determination of brain health. The first solution aims to reduce incidence of dementia in the next elderly generation. It comprises a headband with two types of neuroimaging sensors that together determine an individual’s risk for developing dementia decades before the first symptoms appear. Individuals identified as high-risk can then use the Mind over Matter behavioural change app to reduce their risk by up to 50% through lifestyle changes.

Mush is the number one app that connects mums and mums-to-be to their local community, providing a space to share advice and support, join nearby meet-ups and start lifelong friendships.

Since launching in 2016 Mush has had over half a million downloads, and now every month 100,000 mums are using Mush to connect and find support when they need it the most.

A 2019 fellow of the NHS Innovation Accelerator, Mush is backed by GP’s, Midwives and Health Visitors through its mission to prevent social isolation and loneliness for mums and mums-to-be.

OurPath is a 6-month, QISMET-approved digital lifestyle change and structured education programme for people living with type 2 diabetes. We combine a registered dietician, health tracking technology (scales & activity tracker), structured education and a smartphone app to deliver significant health outcomes. In a recent project, we achieved 8.3% average weight loss after 6 months and reduced HbA1c by an average of 13.6 mmol/mol alongside a completion rate of 79%. We’ve been adopted across more than 50 CCGs and we’re one of the digital providers for the National Diabetes Prevention Programme.

QuiqSolutions has developed a unique and highly innovative approach to quality assurance, compliance and feedback via the QuiqCare cloud platform, used by over 400 Health & Social care organisations and in major projects with NHS England and CCGs nationwide.

QuiqCare enables primary care providers to completely automate and digitise their auditing, feedback and quality assurance obligations in a single on-line platform. Dashboards give real-time views and schedules ensure that nothing is missed.

To arrange a demonstration or to find out more visit quiqsolutions.com

RIVIAM Digital Care provides a secure platform and services for health and social care organisations to collaborate and co-ordinate care to improve people’s lives. RIVIAM enables:
- the creation and management of new care pathways
- transformation of how service centres work and manage referrals
- the delivery of citizen-focused, easy to use digital services such as web portals and video consultation.

Our services integrate seamlessly with GP systems EMIS Web and TPP SystmOne and NHS Digital services.

Today in the Wessex area, we help to manage the health of thousands of people in Wiltshire, Dorset and Hampshire, as well as further afield. Come and have a discussion and demo.

Visit riviam.com to find out more

The Frailty Team within Southern Health Mid and North Hampshire provide education, admission avoidance and consultancy to NHS teams on people living with Frailty. Today, they are demonstrating virtual reality headsets, which gives users an idea of what it is to live with frailty.

The Development People provide training, development, business consultancy and software solutions for Healthcare professionals.

We support healthcare professionals to find better ways of working through people and processes that benefit both the employees and the patient. We have worked within Primary care since 2015, designing and delivering training and development solutions.

PForm+ is our simple, easy to use approach and system to replace annual appraisals.

Developed specifically for healthcare environments, the PForm+ approach (and supporting software) will not only increase productivity but save valuable management time, improve employee engagement, encourage standardised behaviours across your organisation – all while supporting the CQC ‘Well-Led’ criteria.

Written Medicine is an award-winning and evidence-based platform and APIs are used by healthcare professionals to reduce communication barriers by providing accessible personalised medication information in the patient’s preferred format. Our solutions allow system suppliers the ability to print crucial medication information in:

- crystal clear English
- additional languages
- pictograms

Portsmouth University (funded by NHS HEE), UCL and Barts NHS trust used our solution to evaluate the efficacy of bilingual labels. The results were overwhelmingly positive and showed our solution improves; communication, patient experience, medication safety and adherence.

Our solution is used by a number of NHS Trusts and private hospitals in London.

Visit writtenmedicine.com to find out more

YOURmeds is the leading medication adherence solution in the UK. YOURmeds supports people in the Community to take their medication correctly, thus improving their health and outcomes.

Medication cuts across all areas of health and social services, so improving adherence leads to significant cost savings for both the NHS and Social Services.

Our approach is unique in that we put the patient at the centre of what we do, and they create their own support network, leading to better adherence. We work with a number of councils, such as Manchester, Trafford, West Lothian.
