

# Hampshire and Isle of Wight Digital Strategy

## Integrated Health and Care Records

Comprehensive longitudinal care record accessible at the point of care.

- Health and Care professional will have easy access to a richer set of shared data in near real-time
- Citizens will have access and be able to contribute to their own record
- Health and Care professional in HIOW will have access to data in the Dorset Care Record

## Information Governance

Clear and consistent information governance arrangements across HIOW

- A more integrated approach to Information Governance
- A joint group to overcome barriers to sharing
- Removing confusion and complexity in issues relating to data sharing

## Digitisation and Infrastructure

Foundation for information being recorded and viewed digitally at the point of care

- Wider use of common system technologies such as video conferencing
- Reducing reliance on paper records and fax machines to enhancing digital maturity to better enable local system transformation
- Improve patient safety

## Intelligence and Analytics

Better use of data to drive substantial improvements in health and care

- Improve the health of our population by planning services around our population needs rather than providing a “one size fits all” service.
- Helping care professionals quickly identify patients which would most benefit early intervention.
- Improve understanding of the quality of care delivered across different parts of HIOW

## Digital Access and Empowerment

Enabling patients to interact with their record and collaborate in their care

- To have safe, on-line access, to their own health data
- The ability to use a range of on-line services to book appointments, seek medical advice (e.g. 111, e-consult) and interact with health and care professionals
- To enable patients to take a more proactive role in managing their care

## Public and Clinical Engagement

Ensuring involvement of professionals and citizens in the development of our digital plans

- Greater awareness across our population of the digital alternatives to the traditional means of accessing health and care services.
- Improving the confidence of our care professionals in the use of digital solutions
- Easing pressure on care professionals by use of digital solutions.
