London Care Home Resource Pack

DATE 26th May 2020
Version 2.0
Review Date: 9th June 2020
If you are reading this guidance after 9th June 2020, check to see if there is an updated version.
To provide feedback on this pack contact: hlp.ehchprogramme@nhs.net

This London guide is designed to complement and not replace local guidance and professional judgement. It will be updated to align with other national and regional guidance once published.

NHS England and NHS Improvement
The purpose of this resource pack

Provide a resource pack written for care providers.

To provide clear guidance for London Care Homes aligned with NHS 111 Star lines and London COVID-19 Resource Pack for Primary Care ensuring that national guidance and good practice can be embedded locally by care providers.

Ensure escalation routes are clearly identified for care providers.

Topics covered in this resource pack:

- Summary: Suspected Coronavirus Care Pathway - Residential and Nursing Care Residents
- Urgent clinical advice for care homes concerned about a resident displaying symptoms of COVID-19
- Infection Prevention and Control
- PPE and escalating your supply issues
- Donning & Doffing
- Reporting an outbreak in your home
- Testing residents and staff
- PHE care home testing results: actions for care home residents and staff
- Admissions into your home
- Unable to accept a resident
- Managing respiratory symptoms
- Supporting your residents with learning disabilities
- Supporting your residents with dementia
- Supporting residents who are more confused than normal
- Managing falls
- Working with primary care and community services
- Support from primary care and community services
- Using technology to work with health and care professionals
- Supporting residents’ health and well-being
- Talking to relatives
- Advance Care Planning and Coordinate My Care (CMC)
- Supporting care in the last days of life
- Verification of death – national guidance
- Care after death
- Care after death – using PPE and IPC
- Supporting care home staff well-being
- Staff mental health and emotional well-being

An updated resource pack will be shared with you every two weeks.
Summary: Suspected Coronavirus Care Pathway - Residential and Nursing Care Residents

Suspected Cases
Consider COVID-19 infection in a resident with any of the following:
• New continuous cough, different to usual
• High temperature (≥37.8°C), shivery, achy, hot to touch
• Loss or change to sense of smell or taste
Care home residents may also commonly present with non-respiratory tract symptoms, such as new onset/worsening confusion or diarrhoea and other subtle signs of deterioration.
Record observations where possible: Date of first symptoms, Blood Pressure, Pulse, respiratory rate and Temperature (refer to Thermometer instructions) – Remember to Maintain fluid intake
For more support, call the residents GP in the first instance
Call 111* Star 6 for urgent clinical advice, or if the GP is not available – this will put you in contact with a Clinician in NHS 111

Isolation for people who walk around for wellbeing (dementia, learning disabilities, autism)
Use standard operating procedures for isolating residents who walk around for wellbeing (‘wandering’). Behavioural interventions may be employed but physical restraint should not be used.
When caring for, or treating, a person who lacks the relevant mental capacity during the COVID-19 pandemic, please follow government guidance.

Communication with the NHS
• Use Restore2 (a deterioration and escalation tool) if you have been trained to do so
• Where appropriate please ensure that residents are offered advance care planning discussions and that their wishes are recorded on Coordinate My Care (CMC). Make sure you have easy access to the residents CMC or Ceiling of Treatment plan when you call NHS 111 *Star Line (or 999)
Do you have NHS Mail?
Send emails directly to your GP, Community Team and Hospital Contact hlp.londonchnhsmailrequestss@nhs.net to get an NHS.net email set up
• Please register and use Capacity Tracker to support hospital discharge planning. Continue to complete the Market Insight tool if you normally do.

Isolate and Monitor
Resident to be isolated for 14 days in a single bedroom. Use Infection Control guidance
Care for resident using PPE (what to use and how to wear and dispose)
Due to sustained transmission PPE is to be used with all patients. Additional PPE is required for Aerosol Generating Procedures as described in the table.
Use correct Handwashing technique (video)
Consider bathroom facilities. If no en-suite available.
• Designate a single bathroom for this resident only
• Use commode in room

Record observations if concerned to inform health services
If Resident deteriorates at any stage – Escalate to 111* Star 6 or 999
Be explicit that COVID-19 is suspected and ensure you have easy access to the residents CMC plan

What to do in case of an outbreak?
An outbreak is defined as one or more residents in the care home diagnosed with symptoms compatible with COVID-19.
Contact the Public Health England London Coronavirus Response Cell in the event of an outbreak
Phone Number: 0300 303 0450
Email: LCRC@phe.gov.uk
Update: Capacity Tracker, your Local Authority and RIDDOR Guidance: Admission and Care of Residents during COVID-19 Incident

How to access Personal Protective Equipment (PPE):
• Order PPE through your normal supplier. If this isn’t possible arrangements have been made with seven wholesalers to provide PPE to the social care sector.
• Contact your Local Authority if you are still unable to get PPE provision.
• Guidance for Residential Care Providers

Resources and Support for Care Home Staff
• Guidance on how to work safely in care homes
• COVID-19 Care Platform
• Queens Nursing Institute Facebook Page
• RIDDOR reporting of COVID-19

This London guide is designed to complement and not replace local guidance and professional judgement.
It will be updated to align with other national and regional guidance once published. The guidance in this document is accurate as of 26th May 2020
Version 2.0 20200526
Urgent clinical advice for care homes concerned about a resident displaying symptoms of COVID-19

• There is a national COVID-19 111 service but in London, care home staff concerned about a resident who may have COVID-19 symptoms are being asked to call NHS 111 Star*6 for faster access to urgent advice from a senior clinician if they cannot get through to the resident's own GP.

• Before calling, record observations where possible: Date of first symptoms, blood pressure, pulse respiratory rate and temperature (refer to thermometer instructions). If there is a care plan for your resident, for example a CMC or DNAR plan, please have access to it.

At this stage, you will be prompted: “If you are calling about coronavirus symptoms, please press 1, or press 2 to continue”.

PLEASE PRESS 2 TO ACCESS THE NHS 111 STARLINES
Infection Prevention and Control

Infection prevention and control:
• Follow the guidance on handwashing and social distancing
• Follow the guidance to see if you should be using PPE
• Masks should be worn when doing any task that requires you to be within 2 metres of your residents
• Masks can be used continuously, depending on different scenarios
• Gloves and aprons are for single patient use only
• If you take your mask off, it MUST go in the clinical waste bin

Follow clinical advice on length of isolation for your resident which will depend on clinical symptoms and test results. Use Infection Control guidance.

Care for resident using PPE (what to use and how to wear and dispose).
Due to sustained transmission PPE is to be used with all patients. Additional PPE is required for Aerosol Generating Procedures as described in the table.
• Use correct handwashing technique (video and guidance)
• Consider bathroom facilities. If no en-suite available:
  o Designate a single bathroom for this resident only
  o Use commode in room

Best practice - How to hand wash: Poster
PPE and escalating your supply issues

You still need to be ordering your usual PPE supplies of gloves, aprons and soap/sanitiser but we also know this has been a challenge and want to support you.

How to access Personal Protective Equipment (PPE):

- Order PPE through your normal supplier. If this isn't possible arrangements have been made with seven wholesalers to provide PPE to the social care sector.
- Contact your Local Authority if you are still unable to get PPE provision.
- Guidance for Residential Care Providers

When contacting your Local Authority:

- Outline your concern including the requirement
- What your current stock levels are and if you have confirmed or suspected COVID cases within your home.
- If you do not get a response from your local authority, please ask them to escalate to the STP for mutual aid support
- Where issues with local supply exist, this will be escalated to the regional Supply Chain team for support.

Resources
Government PPE Plan.
PPE for Residential Care Providers: Guidance
Donning & Doffing

In your care home:
Different types of PPE is worn depending on the type of work people do and the setting in which they work. Click on this link to see the video on how to put on PPE and take it off in your care home. You can also use the poster on the right.

Why are people wearing different PPE?
You may see other people wearing different types of PPE, for example, paramedics, district nurses and GPs. This is because some roles will have contact with more people in different procedures and settings, who are possibly infected. In addition, there are a number of styles of PPE made by different manufacturers. You will see, for example, not all face masks will look the same.

Resources
PPE in all settings: Guide
Personal Protective Equipment from Public Health England and the NHS: Video
Reporting an outbreak in your home

What to do in case of a COVID-19 outbreak?
An outbreak of COVID-19 is defined as **one or more residents** in the care home diagnosed with compatible symptoms. The NHSE and PHE definition for COVID-19 infection in a resident is to consider the following:

- New continuous cough, different to usual
- High temperature (≥37.8°C)
- Loss or change to sense of smell or taste

Care home residents may also commonly present with **other signs of being unwell** such as being more confused, having diarrhoea, dizziness, conjunctivitis and falls. Residents may also present with **changes in usual behaviours** such as being restless or **changes in abilities** such as walking. ([slide 4](#)).

Record observations where possible: Date of first symptoms, blood pressure, **pulse respiratory rate** and Temperature (refer to thermometer instructions) – remember to **maintain fluid intake**

For more clinical support, call the residents **GP** in the first instance. Call **NHS 111* Star 6** for urgent clinical advice, or if the GP is not available – this will put you in contact with a Clinician in NHS 111

**Notify outbreaks to:** Public Health England London Coronavirus Response Cell for **infection control advice** and access to **initial testing**
**Phone Number:** 0300 303 0450
**Email:** LCRC@phe.gov.uk
**Update:** Capacity Tracker, your Local Authority and RIDDOR
**Guidance:** [Admission and Care of Residents during COVID-19 Incident](#)

For **PPE** information - see [slide 6](#)
For **NHS 111* Star 6** information - see [slide 4](#)
Testing residents and staff

Testing of residents and staff, in combination with effective infection control measures, supports prevention and control of Covid-19 in care homes.

All care homes with older people and people with dementia can register for delivery of home testing kits for all staff and residents, whether or not they have symptoms.

Staff are offered priority access to the tests, which is different from a member of the public requesting a test. The test involves taking a swab of the inside of a person’s nose and sometimes from the back of your throat, using a long cotton bud.

The test confirms if someone currently has coronavirus.

Please ensure that you talk to and prepare the resident for a test, e.g. easy read information, objects of reference, a demonstration video etc.

Carers and nurses who will be swabbing residents in care homes should complete the online care home swabbing competency assessment before carrying out swabbing. Register at www.genqa.org/carehomes

Think
• Are there any residents who you suspect to have COVID-19 symptoms?

Ask
• What is the latest advice on testing in care homes? This may change.

Do (as of 26 May 2020)
• If one or more residents are symptomatic, call PHE London Coronavirus Response Cell (LCRC) Tel 0300 030 0340 email lcrc@phe.gov.uk or phe.lcrc@nhs.net. LCRC will provide infection control support and send test kits for all residents and asymptomatic staff on the day. The results will be sent back to you from LCRC via email (nhs.net email or password protected) along with guidance on what to do next, depending on negative or positive results.
• If there are no symptomatic residents and for ongoing outbreaks, testing can be arranged via the DHSC portal at https://request-care-home-testing.test-for-coronavirus.service.gov.uk/ or phone 0300 303 2713

Symptomatic care home staff should follow national guidance on self-isolation, details can be found on this link, and arrange a test as an essential worker via this link direct to the website.
If any care home of any type suspects a case or outbreak, the local Health Protection Team must be informed. In these circumstances Pillar 1 tests are arranged for symptomatic cases and Pillar 2 testing for other residents and staff.
The admission of patients into your home from hospital or community settings raises numerous challenges.

Below is a summary of the current national guidance:

- For all admissions to your home, whether returning residents or new residents, from a hospital or from a community setting, the resident should be managed in isolation for 14 days, regardless of a positive or negative swab from hospital, and regardless of whether they are showing symptoms or not.
- For residents being discharged from hospital, most will be swabbed 48 hours before discharge. Provided all Infection Prevention and Control advice is followed, it is safe to accept a resident into your home.
- The Hospital Discharge Service and staff will clarify with care homes the COVID-19 status of an individual and any COVID-19 symptoms, during the process of transfer from a hospital to the care home.
- Discharge can still happen while awaiting results, as a negative result is not required to enable discharge.
- Risk Assessments should be carried out in line with current guidance and recommendations. See example risk assessments and templates.

Resources
Stepdown of infection control precautions and discharging COVID-19 patients: Guidance
COVID-19: Adult Social Care Action Plan
Unable to accept a resident

There may be grounds for a care home to decline admission if the home feels they are unable to manage the resident's isolation needs.

Below is a summary of the current national guidance:

- If there is a side room with an en-suite, then this is adequate facility for isolation but there may also be staffing challenges which may influence your decision to accept.
- If you are unable to accommodate a resident in isolation, the national guidance indicates that the Local Authority has some responsibility to help. However, your local CCGs will also support making the necessary arrangements with a joint approach between health and social care in supporting care homes with temporary alternative placements.
- If alternative provision is required this would be for a period of 14 days.

Resources
Stepdown of infection control precautions and discharging COVID-19 patients: Guidance
COVID-19: Adult Social Care Action Plan
A new continuous cough is one of the symptoms of COVID-19. However, coughing can continue for some time even if the person is getting better. This does not necessarily mean the person is still infectious, especially when other symptoms have settled down.

There are simple things you can do to help relieve coughing e.g. drinking honey & lemon in warm water, sucking cough drops/hard sweets, elevating the head when sleeping and avoiding smoking.

Worsening or new breathlessness may indicate that the person is deteriorating. However, people can also appear breathless because they are anxious, especially when they are not used to being on their own in a room, or seeing staff wearing PPE.

50% of people with mild COVID-19 take about 2 weeks to recover. People with severe COVID-19 will take longer to recover.

Think
• Does the resident look short of breath or have difficulty in breathing?
• Is this worse than the day before?
• Has the resident already got an advance care plan or Coordinate my Care (CMC) record for managing these symptoms?

Ask
• Does the resident need another clinical assessment?
• Should observations or monitoring commence?

Do
• Try and reassure the resident and if possible, help them to adopt a more comfortable position, for example, sitting upright might help
• Consider increased monitoring
• If this is an unexpected change:
  o Call the GP in the first instance
  o Call NHS 111 Star*6 if concerned, or if GP is not available
  o In emergency call 999
  o Be explicit that COVID-19 is suspected
• If this is an expected deterioration, and there is an advance care plan:
  • Follow the care plan instructions
  • Call GP for further advice if needed
  • Call community palliative care team if they are already involved and further advice is needed

Supporting someone with breathlessness: Guide
Managing breathlessness at home during the COVID-19 outbreak: Guide
Supporting your residents with learning disabilities

People with learning disabilities may be **at greater risk** of infection because of other health conditions or routines and/or behaviours. It is important that staff are aware of the risks to each person and reduce them as much as possible.

This will mean significant changes to the persons care and support which will require an update in their care plan. If the resident needs to exercise or access the community as part of their care plan, it is important to manage the risk and support them to remain as safe as possible.

You may need help or remind the resident to wash their hands:

- Use signs in bathrooms as a reminder
- Demonstrate hand washing
- Alcohol-based hand sanitizer can be a quick alternative if they are unable to get to a sink or wash their hands easily.

Residents that are high risk may require **shielding**, this may be difficult in shared accommodation, it is important to ensure that you follow the government guidance as much as possible.

To minimise the risk to people if they need access health care services you should use supportive tools as much as possible such as a hospital passport and/or coordinate my care.

If you are aware that someone is being admitted to hospital, contact your local community learning disability service [click here] or learning disability nurse within the hospital.

**Think**  (Consider using the STOP and Watch Tool)

- Is something different? Is the person communicating less, needing more help than usual, expressing agitation or pain (moving more or less), how is their appetite
- Does the person need extra help to remain safe and protected?

**Ask**

- How can we engage the person to ensure that they understand the change in activities.

**Do**

- Allow time to remind the person why routines may have changed.
- Develop new care plans with the person and their family

Supporting your residents with dementia

There will be a **significant change in routine** for people living with dementia. People they love are no longer able to visit and they may not have access to the activities they enjoy.

People may behaviour in ways that is difficult to manage such as **walking with purpose** (wandering). Behaviour is a form of communication, often driven by need. Someone could be hungry, in pain or constipated, they might be scared or bored. Ask someone walking if there is something that they need, try activities with them and if possible go for a walk with them.

Some people **ask to go home** – this is often because people want to feel safe and secure. Talking about family that they are missing and looking at photographs can help.

People might find **personal care frightening** (it might seem like they are aggressive). Giving them time to understand what is happening, showing them the towel and cloth, encouraging them to do what they and keeping them covered as much as possible can help.

People with dementia may need help or reminders to **wash their hands**. Use signs in bathrooms as a reminder and demonstrate hand washing. Alcohol-based hand sanitizer can be a quick alternative if they cannot get to a sink or wash their hands easily.

People with dementia may find being approached by someone wearing PPE **frightening** - It may be helpful to laminate your name and a picture of your role and a smiley face.

If people with dementia become unwell they might get **more confused** (delirium). See the **Supporting residents who are more confused than normal** page for further information.

**Think**
- Is my resident unwell or frightened?
- Does my resident need extra help to remain safe and protected?

**Ask**
- Have I done all I can to understand my resident’s needs?
- What activities does my resident like to do?

**Do**
- Introduce yourself and explain why you are wearing PPE
- Allow time to remind residents why routines may have changed

**Resources**
- Meeting the needs of people with dementia living in care homes [video]
- Easy read poster explaining why staff are wearing PPE
- Communication cards can help to talk about COVID-19
- HIN activities [resources] during COVID-19
- Mental Capacity Act and Deprivation of Liberty Safeguards (DoLs) COVID 19 [guidance] and [summary]
- British Geriatric Society [short guide dementia and COVID-19]
Supporting residents who are more confused than normal

Delirium is a sudden change or worsening of mental state and behaviour. It can cause confusion, poor concentration, sleepiness, memory loss, paranoia, agitation and reduced appetite and mobility.

COVID-19 can cause delirium – it might be the only symptom. Delirium can also be caused by infections, hospital admissions, constipation and medications.

You can help to prevent delirium by:
• Stimulating the mind e.g. listening to music and doing puzzles
• Physical activity, exercise and sleeping well
• Ensure hearing aids and glasses are worn
• Ensuring plenty of fluids and eating well
• Addressing issues such as pain and constipation

If you are concerned that a resident has delirium speak with their GP or call 111*6 who can try and identify the cause.

Delirium in people with learning disabilities may indicate a deterioration in the person’s physical or mental health. Please contact the individuals lead contact to discuss any changes and seek guidance.

Reducing noise and distraction, explaining who you are and your role and providing reassurance can help. Residents with delirium may find PPE distressing - having your name, role and picture to show people may help.

Think
• What can I do to help prevent my resident becoming more confused than normal
• Has my resident changed – are they more confused?
• What can I do to support my resident who is more confused then normal

Ask
• The residents GP or call 111*6 for advice and guidance
• Why is my resident more confused then usual?

Do
• Explain who you are and why you are wearing PPE
• Provide reassurance
• Add information on preventing new confusion to your residents care plan

Resources
• Delirium prevention poster
• Delirium awareness video
• Delirium and dementia video
Managing falls

**Prevention is better than cure** and continuing to implement falls prevention interventions such as strength and balance exercises is important.

To help prevent falls:
- Complete your local falls assessment and care plan
- Keep call bell and walking aid in reach of your residents
- Ensure residents shoes fit well and are fastened and clothing is not dragging on the floor
- Optimise environment – reduce clutter, clear signage and good lighting
- Ensure the resident is wearing their glasses and hearing aids

Residents do not need to go to hospital if they appear uninjured, are well and are no different from their usual self. People with learning disabilities or dementia may not be able to communicate if they are in pain or injured following a fall, take this into account when deciding on whether or not to go to hospital.

Going to hospital can be distressing for some residents. Refer to their **advance care plan** to make sure their wishes are considered and take advice e.g. from GP or 111*6. Only ring 999 when someone is seriously ill or injured and their life is at risk.

Whilst waiting for an ambulance, keep your resident as comfortable as possible. Offer a drink to avoid dehydration and painkillers such as paracetamol to ease discomfort - tell the ambulance staff what you have given the resident.

---

**Think**
- Is an emergency ambulance required for the resident who has fallen?

**Ask**
- Contact your GP, community team or 111*6 for clinical advice and support
- Follow advice on NHS website on when to ring 999

**Do**
- Use assessment and observation to monitor for deterioration or injury in the hours following a fall
- If available and safe use appropriate lifting equipment
- If it is unsafe to move someone who has had a fallen keep them warm and reassure them until the ambulance arrives
- Ensure you have up to date moving and handling training
- Continue to implement existing falls prevention measures

Working with primary care and community services

It is important we work more closely than ever with our colleagues who provide care in the community, as well as GPs. Here are some checkpoints you should consider when working with primary care and the wider multi-disciplinary team:

- Are all residents registered with a GP?
- Are contact details (including bypass numbers) correct for GP, District nurse, pharmacist, hospice and other local services?
- Are all care plans complete and updated regularly with primary care team input?
- Are Advance Care Plans in place for all residents and shared on CMC? If not, can we help our primary care teams achieve this?
- Have we identified any residents who are especially ‘at risk’ from COVID-19 and implemented plans to ‘shield’ them?
- Are we ready and able to communicate with our primary care team by video link?
- Keep a record of non urgent concerns and queries to discuss with your primary care team when convenient

Resources
Primary Care and community health support to care homes: [letter](#)

Think
- Do we need to discuss new ways of working with our GPs and community services staff?
- How do we support remote consultations and video links? E.g. access to laptops, tablets, internet access, means for video meetings etc.
- How can we communicate in the most effective way to support our residents?
- What help do we need to keep our residents safe?

Ask
- Which new ways of working with GPs and community services staff will be the most effective
- Which service should I contact to support my residents and care home staff
- Can we work together to support proactive planning and Advance care plans for residents

Do
- Start using NHS mail
- Ask for help when you need it
- Learn to communicate effectively using tools such as SBAR or other locally approved tools
- Be clear about what support you can expect from your primary care and community services
Support from primary care and community services

Virtual Check-ins:

- Starting in May 2020 weekly virtual “Check-ins” will be carried out by GPs or other members of the primary care team for residents identified as a clinical priority.
- The healthcare team (multi-disciplinary team/MDT) supporting your care home will work on a process to support development of personalised and individually agreed care plans including treatment escalation plans for residents reflecting their needs and wishes.
- Your home should have direct support from Primary Care. For example, support could be from GPs, wider MDT, pharmacists, community nurses, geriatricians, community palliative care teams and a variety of other health care professionals, which may vary according to local provision.
- Primary care pharmacists may be able to provide advice and support regarding medication for residents. This may include administration, provision and storage of medication, as well as medicine use reviews for residents.
- Technical support will be needed to enable homes and the wider MDT to help deliver care, including eg. Microsoft Teams, video conferencing etc (See next slide).
- Access to equipment will be helpful in some care home settings, for example, via remote monitoring using pulse oximetry to test oxygen levels, as well as other equipment.

Shielding in care home settings:

- The guidance on shielding is absolutely valid to those who are clinically extremely vulnerable and living in long term care facilities, including care home facilities for the elderly and those with special needs. See this link which details all the actions to be followed.
Using technology to work with health and care professionals

COVID-19 is changing how we access services, this is particularly relevant to care homes as many healthcare professionals can no longer visit your homes.

Through utilising digital tools you can ensure you can continue to access advice, support and treatment for your residents from a range of health and care professionals. Digital tools can help ensure information on residents is sent and received securely and help facilitate remote monitoring which can support clinical decision about your residents.

To effectively utilise these tools you will need to think about the current technology you have in your organisation:

What you will need:
- Minimum 10mb broadband speed and adequate coverage across your home - click here to test your broadband speed.
- An email address, preferably NHS mail. Signing up to NHS mail is easy and allows you to share confidential information securely
- A device which can be taken to the resident or a confidential space.

Helpful tips:
- Liaise with your GP/HCP to find out how they are delivering remote consultations (AccurX, MS teams, Attend Anywhere)
- Once you have NHS mail you can access MS Teams. Click here to learn more.
- Digital social care have launched a technology helpline to support you.

Think
- Do I have at least 10mb broadband speed in place for remote consultations? If you need support with increasing the WiFi speed, please email England.CareHomesDigital@nhs.net
- Do I have the technology in place to take observations and share them with a healthcare professional?
- Do I have a way of sharing resident information with health and social care securely? NHSmail can provide you with a secure way of securely sharing information with the system.
- Do I know how to make a remote consultation using the technology I have? E.g. Teams.

Ask
- What do I need to do to enable remote consultations?
- How do I access NHSmail?
- Can my Local Authority or CCG support me?
- How will you resource the use of technology?

Do
- Access the helpful training resources and webinars produced by Digital Social Care Link
- Sign up for NHS mail hlp.londonchnhsmailrequests@nhs.net
- Download MS teams
- Ask your Local Authority/CCG/AHSN for support adopting new technology

Supporting residents health and well-being

Your role is important in helping people in your care to enjoy their daily life and take a full part in it as much as they can and is possible. When choosing activities it is important to take into account, the likes and preferences of your residents.

The Health Innovation Network (HIN) has produced an Activities guide which collates a number of activities which are free to use and dementia friendly: activities on tablets, access to online newspapers and magazines, physical activity, film, music and TV and livestreams. The guide can be found here.

Some of your residents may have lost friends that they live with, care staff or family. At a Loss recommends speaking to the bereaved or offering help, listening (ask, don’t give solutions), showering them with good things, ensuring others do too, and keeping it up.

Cruse also recommends ways to support someone who is grieving. Be honest. Acknowledge the news by sharing your condolences, saying how sorry you are that their friend or relative has died. Share your thoughts about the person who died (if appropriate), tell your friend or relative how much the person will be missed and that you are thinking of them. Remind them that you are there for them, as much as you can be.

**Think**
- How it can feel when you have nothing to do all day or no one to talk to?
- How can I engage my resident in activities they like and enjoy?
- How can I enable and support residents to make video calls?

**Ask**
- “What do you enjoy?” “what do you like to do?”
- Family members about their loved ones preferences
- Check the care plan to learn more about your residents family and social history
- Can the Local Authority and CCG support us?

**Do**
- Refer to existing material such as the HIN’s activity guide
- Use the [NHS live well](https://www.nhs.uk/live-well) resources
- Make activities fun and engaging

Version 2.0 20200526
Talking to relatives

Conversations with relatives about COVID-19 can be challenging.

Think
• What information do I need to tell the relative
• How can I keep the language simple

Ask
• If the relative is ok to talk
• What the relative already understands about their loved one
• If they have any questions or need any other advice or support

Do
• Introduce yourself
• Comfort and reassure
• Allow for silence
• Talk to colleagues afterwards

Advance Care Planning and Coordinate My Care (CMC)

A blanket policy of Advanced Care Planning/Coordinate My Care/Do Not Attempt Resuscitation is NOT proposed.

Conversations around end of life are challenging, particularly in these difficult times. Residents may want to express their wishes in relation to what care they want if they become unwell.

Open and sympathetic communication with residents and those important to them enables care wishes to be expressed. It is important that people do not feel pressurised in to such conversations and decisions before they are ready.

**Advance care planning discussions should be documented** on Coordinate My Care so that urgent care services can view the persons wishes.

Residents can start their own plan through my CMC with family or staff support. That initiated work is then checked, edited and signed off by an appropriate health care professional making it visible to all appropriate users including Urgent Care Services. Alternatively, Nursing Homes can register to use CMC directly.

**Think**
- Does the person have a CMC care plan which could be put onto CMC?
- If not, could the resident with support start a plan in My CMC?
- Could our care home register use CMC to help create care plans for approval by our GPs or other senior clinicians?

**Ask**
- The resident if they would like to talk about their wishes and preferences if they become unwell. Involve those who matter to them in conversations
- The resident if their advance care planning discussions can be shared through a CMC care plan

**Do**
- Assist clinicians in creating CMC plans from existing advance care plans
- Help residents (that wish) to complete a My CMC plan to be approved by their GP
- Work with GP/community nurses and palliative care teams to finalise and approve plans

**Resources**

Supporting care in the last days of life

Some residents will have expressed their wishes to not go to hospital and to stay and the care home and made as comfortable as possible when they are dying.

A family member is able to visit their relative who is dying. If they are unable to visit, they can be supported to connect using technology.

Common symptoms at the end of life are fever, cough, breathlessness, confusion, agitation and pain. People are often more sleepy, agitated and can lose their desire to eat and drink.

Breathing can sound noisy when someone is dying – due to secretions, medicine can be given to help.

Some people can become agitated or distressed when dying – provide reassurance and things the person would find comforting e.g. music.

Resources
Guidance on visitors for people in their last days of life: Guide
End of Life Care: Support during COVID-19: Guide
Key to care: End of life care
Royal College of GPs COVID: End of Life Care in community
NICE COVID-19 rapid guidelines managing symptoms in community

Think
- Have we contacted the family?
- Does the resident have a CMC plan? – what are the residents wishes and preferences

Do
- We have the medication needed to help relieve symptoms (e.g. pain, nausea, breathlessness)?
- Can I make the resident more comfortable - are they in pain (look or grimacing), are they anxious (can make breathlessness worse)
- Can use a cool flannel around face to help with fever and breathlessness. Sitting up in bed and opening a window can also help. Portable fans are not recommended
- If the person can still swallow honey and lemon in warm water or sucking hard sweets can help with coughing
- If having a full wash is too disruptive washing hands face and bottom can feel refreshing

Ask
- The family and resident if they want to connect using technology
- The GP or palliative care team or 111 if urgent for advice about symptom control and medication
Verification of death – national guidance

The guidance covers deaths in care homes (under community settings) which are expected including confirmed and unconfirmed COVID-19 cases.

The guidance states that “verification of death is performed by professionals trained to do so in line with their employers’ policies (for example medical practitioners, registered nurses or paramedics) or by others with remote clinical support.”

**Equipment** to assist verification of death includes:
- Pen torch or mobile phone torch
- Stethoscope (optional)
- Watch or digital watch times
- Appropriate personal protective equipment (PPE)

**Process of verification** in this period of emergency:
1. Check the identity of the person – for example photo ID.
2. Record the full name, date of birth, address, NHS number and, ideally, next of kin details.
3. The time of death is recorded as the time at which verification criteria are fulfilled.

For **remote clinical support**:  
During core practice hours call the residents GP. Out of hours call NHS111*6 where a clinician will provide remote support to work through the process.
What is an Expected Death?

- An expected death is the result of **acute or gradual deterioration in the patient's health and often due to advanced disease and terminal illness**. For example, a person having an expected death due to metastatic cancer and unrelated to COVID-19.
- A patient diagnosed with COVID-19 who is being treated in the community with end of life care plans in place, would be an expected COVID-19 death and should be managed according to their end of life care plan. This will include patients with confirmed COVID-19 who have been discharged from Hospital to a Care home with an end of life plan.

✓ **During core practice hours: call the person's registered general practice**

✓ **Outside of core practice hours: call NHS 111*6**

**Verification of Death** will need to be completed in the home soon after death. This can be done either by suitably trained Health Care Professional, such a registered nurse in the care home who has completed the correct training*, or another suitably trained Health Care Professional available to visit (eg. District/community nurse).

The Learning Disabilities Mortality Review (LeDeR) Programme was set up to review every death of a person with a learning disability over the age of 4. You can find out more about LeDeR and notify the LeDeR that someone has died [here](#).

*Special Edition of Care After Death: [Registered Nurse Verification of Expected Adult Death (RNVoEAD) guidance](#)
Care after death – using PPE and IPC

If the deceased person has suspected or confirmed COVID-19:

• PPE should be used, consisting of disposable plastic apron, disposable plastic gloves and a fluid-resistant surgical mask. Click on this think link for more information

• Ensure that all residents maintain a distance of at least two metres, or are in another room from the deceased person and avoid all non-essential staff contact with the deceased to minimise risk of exposure

• If a member of staff does need to provide care for the deceased, this should be kept to a minimum

• You should follow the usual processes for dealing with a death in your care home, ensuring that infection prevention and control measures are implemented

• Staff in residential care settings are requested to inform those who are handling the deceased when a death is suspected or confirmed to be COVID-19 related as required. This information will inform management of the infection risk.

Following Verification of Death, care after death must be performed according to the wishes of the deceased as far as reasonably possible. The deceased should be transferred to the mortuary/funeral directors as soon as practicable. PHE guidance on the care of the deceased with suspected or confirmed coronavirus must be followed. Click on this link for more information.

Mementoes/keepsakes (e.g. locks of hair, handprints, etc) should be offered and taken at the time of care after death, as they will not be able to be offered at a later date. Mementoes should be placed in a sealed bag and the relatives must not open these for 7 days.
Supporting care home staff well-being

The COVID-19 outbreak is affecting us all in many ways: physically, emotionally, socially and psychologically. It is a normal reaction to a very abnormal set of circumstances. It is okay not to be okay and it is by no means a reflection that you cannot do your job or that you are weak. Some people may have some positive experiences, such as taking pride in the work, or your work may provide you with a sense of purpose. Managing your emotional well-being right now is as important as managing your physical health. If you are concerned about your mental health, your GP is always a good place to start. If it is outside of working hours, contact the crisis line of your borough which is here or if you are known to services, please call your Care Coordinator or the service responsible for your care.

Below are some things to consider to support your own wellbeing:
• These times are temporary and things will get better
• Consider and acknowledge how you are feeling and coping, reflecting on your own needs and limits
• Ask for help if you are struggling. Asking for help when times are difficult is a sign of strength
• Stay connected with colleagues, managers, friends and family. Where possible do check on the needs of colleagues and loved ones
• A lot of things might feel out of your control at the moment. It can help to focus on what we can control rather than what we cannot
• Acknowledge that what you and your team are doing matters. You are doing a great job!
• Choose an action that signals the end of your shift and try to rest and recharge when you are home

To speak to someone:
• Urgent Support: Good-Thinking’s Urgent Support page has numbers and links to help you access urgent support,
• 1:1 Mental health support 24 hours a day: Text FRONTLINE to 85258 for a text chat or call 116 123 for a phone conversation
• Visit Bereavement Support Online or call the free confidential bereavement support line (Hospice UK), on 0300 303 4434, 8am – 8pm
• NHS Psychological therapy (IAPT): Search here to find out how to get access to NHS psychological therapy (IAPT)
• Finances: If relatives of staff are financially effected by COVID-19, they can access the Money Advice Service web-chat or call 0800 138 1677, from www.moneyadviceservice.org.uk
