

## Potentially Inappropriate Drugs in the Frail Elderly

Drug/Drug Class	Warnings /Recommendations
<b>Alpha blockers</b>	
<ul style="list-style-type: none"> <li>e.g. doxazosin, prazosin, terazosin for hypertension</li> <li>alfuzosin and tamsulosin for prostatism</li> </ul>	High risk of postural drop Review benefits -can cause postural drop
<b>Anticholinergics</b>	
<ul style="list-style-type: none"> <li>Bladder stabilisers e.g. oxybutynin, solifenacin</li> </ul>	Avoid (especially if catheterised!) unless specialist recommendation
<ul style="list-style-type: none"> <li>Sedative antihistamines e.g. chlorphenamine, diphenhydramine e.g. Nytol, hydroxyzine, promethazine</li> </ul>	
<ul style="list-style-type: none"> <li>Antispasmodics e.g. dicyclomine, hyoscine, propantheline</li> </ul>	Avoid unless in palliative care for secretion control
<b>Antibiotics</b>	
<ul style="list-style-type: none"> <li>Nitrofurantoin, especially if eGFR &lt;60 as ineffective</li> </ul>	toxicity in acute and prophylactic use –pulmonary fibrosis, rash, hepatitis
<b>Antiarrhythmics</b>	
<ul style="list-style-type: none"> <li>amiodarone, flecainide, sotalol in AF</li> </ul>	Safer to aim for rate control
<ul style="list-style-type: none"> <li>digoxin</li> </ul>	<ul style="list-style-type: none"> <li>Ineffective in pAF</li> <li>Doses &gt;125mcg may be toxic due to renal failure</li> </ul>
<b>Antidepressants; tricyclic</b>	
<ul style="list-style-type: none"> <li>Amitriptyline, clomipramine, dosulepin, imipramine, trimipramine, trazodone</li> </ul>	Avoid use as night sedation Use of low dose for neuropathic pain still increases fall risk Often cause low sodium
<b>Antidepressants; SSRI/SNRI/other</b>	
<ul style="list-style-type: none"> <li>Fluoxetine</li> </ul>	Avoid as very long acting
<ul style="list-style-type: none"> <li>Citalopram, Sertraline, mirtazipine</li> </ul>	Caution Start low dose and check sodium at 7-10 days
<b>Antiemetics</b>	
<ul style="list-style-type: none"> <li>Metoclopramide and prochlorperazine</li> </ul>	Long term use increases risk of parkinsonism
<b>Antihypertensives</b>	
Review antihypertensives in <ul style="list-style-type: none"> <li>Patients admitted with or at high risk of falls</li> <li>Patients with a postural BP drop of <math>\geq 20\text{mm}</math>, especially if symptomatic and resting BP also low</li> <li>Patients with a <b>Systolic BP below 135mm</b> or <b>diastolic BP below 70mm</b> and no history of heart failure or liver failure</li> </ul>	

## Potentially Inappropriate Drugs in the Frail Elderly

<b>Antipsychotics in dementia</b>	
e.g. risperidone, olanzapine, quetiapine	Avoid –can worsen symptoms
<b>Antipsychotics in delerium</b>	
<ul style="list-style-type: none"> <li>Low dose haloperidol (0.5 to 1mg) for 2-4 weeks is drug of choice if treatment is essential</li> </ul>	Ensure treatment is regularly reviewed; stop at discharge whenever possible Ensure instruct GP to review use if essential to continue in community
<b>Benzodiazepines and hypnotics</b>	
<ul style="list-style-type: none"> <li>Clonazepam, chlordiazepoxide, diazepam, lorazepam, temazepam</li> <li>Zopiclone, zolpidem</li> </ul>	Avoid except fits, alcohol detox and palliative care Consider withdrawal regime for long term drugs If temporary use for inpatients, stop at discharge
<b>Diabetes Treatments</b>	
<b>Review/reduce in all patients with Type 2 diabetes with HbA1c below 60</b>	
<ul style="list-style-type: none"> <li>Sulphonylureas e.g. gliclazide, glimepiride</li> </ul>	Caution in in eGFR below 30
<ul style="list-style-type: none"> <li>Metformin</li> </ul>	Stop if eGFR below 30, review when below 50
<ul style="list-style-type: none"> <li>Others</li> </ul>	See BNF
<b>Diuretics</b>	
<ul style="list-style-type: none"> <li>Thiazides e.g. bendroflumethiazide, indapamide</li> </ul>	Caution –drop sodium and potassium
<ul style="list-style-type: none"> <li>Spironolactone</li> </ul>	<ul style="list-style-type: none"> <li>Not if baseline K already over 4.7 or GFR &lt;30</li> <li>Combination with ACEI or ARB increases risk of hyperkalaemia</li> </ul>
<ul style="list-style-type: none"> <li>Furosemide 20mg</li> </ul>	<ul style="list-style-type: none"> <li>Stop if for ankle swelling only</li> <li>Review dose if history of CCF</li> </ul>
<b>NSAIDs and Cox 2 Inhibitors</b>	
<ul style="list-style-type: none"> <li>ibuprofen, diclofenac, ketorolac, naproxen, meloxicam</li> </ul>	<ul style="list-style-type: none"> <li>Avoid if at all possible otherwise use minimum dose for shortest time</li> <li>Co-prescribe PPI for GI protection</li> <li>Monitor renal function</li> </ul>
<b>Proton Pump Inhibitors</b>	
<ul style="list-style-type: none"> <li>Omeprazole, lansoprazole, pantoprazole, rabeprazole</li> </ul>	<ul style="list-style-type: none"> <li>Review regularly and do not initiate without clear indication</li> <li>Usage linked to <i>C difficile</i> infection, pneumonias, osteoporosis,</li> </ul>
<ul style="list-style-type: none"> <li><b>Statins:</b> Review risks (e.g. muscle pain/weakness) and benefits, avoid high doses</li> </ul>	
Use recommended in coronary, cerebrovascular, or peripheral vascular disease if they can do normal activities of daily life and life expectancy is > 5 years	

## Potentially Inappropriate Drugs in the Frail Elderly

### Anticholinergic Burden Scale (ACB)

A score of 3 or more is considered to be clinically relevant in terms of potential for anticholinergic side-effects such as dry mouth, blurred vision, constipation, urinary retention, sedation and consequent increased falls risk. The table below gives most commonly used but is not exclusive.

Score 3	Score 2	Score 1
Chlorpromazine	Amantadine	Atenolol, metoprolol
Chlorphenamine and other sedative antihistamines	Carbamazepine	Benzodiazepines
Clozapine, Olanzapine and most atypical antipsychotics	Levomepromazine	Cimetidine and Ranitidine
Hyoscine, Atropine	Loperamide	Furosemide
Oxybutynin and most incontinence drugs		Digoxin
Paroxetine		Haloperidol
Parkinsons treatments –benztropine, orphenadrine, trihexphenidyl		Nitrates
Tricyclics; Amitriptyline, clomipramine, dosulepin, imipramine, nortriptyline, trimipramine, trazodone		Opiates
		Trazodone
